

HEPU KNIFE GATE VALVE

DATA SHEET

02 | 2015

RANGE OF APPLICATION

HEPU knife gate valves are to be used in the following businesses:

- Sand and gravel extraction/preparation
- Excavation and tunnelling
- Transit-mixed concrete recycling
- Coal and sludge preparation
- Ore preparation
- Steel and smelting works
- Power plants
- Waste incineration systems
- Porous concrete
- Fine sand extraction
- Potash and salt industry
- Suction dredger systems
- Hydrocyclone installations

DESIGN

In heavy, robust construction for on-off operation. With highly wear-resistant polyurethane inserts as interchangeable wear parts.

Because of the structural characteristics, no solids or sediment can be deposited within the gate and thus cannot block it.

Blade material stainless steel
Spindle material stainless steel

OPERATING DATA

Optionally equipped with hand wheel, pneumatic drive, hydraulic drive or electric drive.

Flange connections according to DIN 2576, PN10 (smooth flange).
Nominal diameter from DN 50 up to DN 500.

Because of the heavy and robust construction, the slide is very durable. It is especially worth noting that the slide has a very short fitting length. With any wear that arises, only the two interchangeable PU-inserts are to be changed.
